(54) Title: SPLINT COMBINED USE CAST ABSENCE FOR BONE FRACTURE FIXING

(57) Abstract: Disclosed is a combined splint and cast for immobilizing the injured body part due to fracture, ligament rupture, dislocation or the like. In particular, the present invention relates to a combined splint and cast for immobilizing fractured bones, in which a splint and a cast used for a predetermined period of time until a swelling in the injured body part subsides are injection-molded to be combined into one. Therefore, the present invention can solve inconvenience of working with the conventional plaster caste member by using a hand fixing member, a connecting member an elbow fixing member of the combined splint and cast individually or cooperatively according to the use, for example, a short arm splint, a long arm splint or a hanging cast, minimize the sequelae, such as joint contracture by making possible early joint movement, and frequently correct and inaccurate reduction at its initial stage and malunion by taking intermediate inspections.
